***Election/Restrictions***

Applicant's election with traverse of Group I, claims 1-5, in the reply filed on 4-7-2004 is acknowledged. The traversal is on the ground(s) that at least each of claims 1, 7 and 15 of Groups 1, 11 and 111, respectively, language is present which unequivocally defines the derivation or generation of a signal in response to optically detected movements indicative of a cardiac phase (e.g., cardiac inactivity and activity).

This is not found persuasive because the method claims cited are directed to different inventions i.e. a method of cardiac phase detection or a method of mri microscopy, the method claims cannot be used together since they are different functions. If the method claims are considered combinations they must claim the particulars of any subcombination this is not the case as claim 15 recites an optical fiber not found in the other independent claims and claim 6 recites a derived cardiac signal not found in claim 15 also claim 6 does not recite a derived signal (other than that found in line 6 that lacks antecedent basis).

The requirement is still deemed proper and is therefore made FINAL.

Newly submitted claims 31-36 directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: Newly submitted independent claim 31 recites "optically detecting internal anatomic physical movement" not found in elected claim 1.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution

Art Unit: 3742

on the merits. Accordingly, claims 31-36 withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Negus et al.(U.S.Pat.6,595,987). Negus discloses a heart synchronized pulsed laser system that shows optical detection of cardiac movement and the generation of a trigger signal indicative of the cardiac phase.

***Response to Arguments***

Applicant's arguments filed 10-21-2004 have been fully considered but they are not persuasive. Applicant's argument that detecting the electrical activity of a moving muscle is not the same as detecting the moving muscle itself is not persuasive.

Art Unit: 3742

*Allowable Subject Matter*

Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Foltz, Turcott, Richards, Riederer, Johnson, Blakeley and Sontag are cited to show structure similar to the claimed invention.
